## SUMMARY

Motivated software engineering graduate with strong coding and problem-solving skills. Eager to contribute and grow in a dynamic tech environment.

---

## PROJECT

### Heart Disease Prediction System Using Machine Learning

- Built a machine learning-based heart disease prediction system using Java and Weka, applying the C4.5, MLP, MLR, and FURIA algorithms for classification.
- Implemented advanced feature selection using Correlation-based Feature Selection (CFS) and Particle Swarm Optimization (PSO) to enhance model performance.
- Designed a user-friendly application for patient data input, predictive analysis, and results visualization.

### Python-Based Keystroke Monitoring System

- Developed a Flask-based backend with REST API endpoints for secure keystroke data processing in an isolated research environment.
- Implemented a stealth Windows service using pynput, featuring buffered data transmission to reduce network load and prevent data loss.
- Automated deployment by packaging Python scripts into single-file executables via PyInstaller, enabling zero-configuration setup.

### Online Bookstore

- Developed the backend using Spring Boot and the frontend with React.js for a seamless user experience.

---

## EDUCATION

### B.E Computer Science and Engineering

Sri Krishna College of Engineering and Technology. • 2025

### HSC

SBOA Matric and Hr. Sec School • 2021

---

## CERTIFICATIONS

### Fortinet Certification

- Certified in cybersecurity fundamentals, including network security, endpoint protection, cryptography, and cloud/on-premises security best practices.

### Wipro TalentNext Java Full Stack Certification

- Completed training in full-stack development using Java, Spring Boot, React.js, HTML, CSS, and MySQL.

---

## SKILLS

Programming Languages: Java, Python

Web Development & Web Technologies: React.js, HTML5, CSS3, Spring Boot

Databases: MySQL

Cloud Platforms: AWS (EC2, S3, IAM)

---
